Garoux

Safe, Effective AI Solutions

Core Competencies

Garoux is a data consulting firm specializing in the development of safe, effective artificial intelligence (AI) solutions. We believe that AI has the potential to transform knowledge work by augmenting and automating tedious workflows. We work through all stages of the process — from problem scoping, data collection, and model training through model deployment, integration, and maintenance.

What Makes Us Different

We are fluent in cutting edge AI models and in the challenges of deploying them at government agencies. The rapid adoption of large language models across organizations presents both tremendous opportunities and risks. We know the research and the AI product landscape, and we work with you to find the right way to integrate them into your operations. Our past performance proves it, having developed and deployed a custom large language model for the Environmental Protection Agency as part of an application used by every EPA employee.

Past Performance

The EPA faced a tremendous challenge — how to enable their workforce to manage government records without interrupting their daily work. The

records management team recruited Michael Kreisel as a White House Presidential Innovation Fellow (PIF) to help solve this problem. He fine-tuned state of the art large language models to automatically categorize records according to their retention schedule. This model is deployed and used agency-wide as part of a new and improved records management system.

After completing his time as a PIF, Michael founded Garoux which has continued the project as a subcontractor on the GDIT MAINES contract. Since then we have scaled the machine learning model so that it can make predictions on millions of historical records. We also architected core parts of the records management system including integrations with Microsoft Outlook, OneDrive, and Sharepoint.

Company Information

Garoux LLC is a HUBZone certified small business located in Hyattsville, MD. Garoux was founded by Dr. Michael Kreisel Ph.D., a former Googler and White House Presidential Innovation Fellow. Garoux's AI engineers are experts at integrating AI models into business workflows to drive value for our customers.
